## EE-SX47/67

CSM\_EE-SX47/67\_DS\_E\_13\_2

# Global Standard Slot-type photomicrosensors with 50- to 100-mA direct switching capacity.

- Series includes models that enable switching between dark-ON and light-ON operation.
- Response frequency as high as 1 kHz.
- Easy operation monitoring with bright light indicator.
- Wide operating voltage range: 5 to 24 VDC
- Models in which the light indicator turns ON for dark-ON operation are also available.
- A wide range of variations in eight different shapes.
- Flexible robot cable is provided as a standard feature. \*2

Be sure to read *Safety Precautions* on page 5.

- \*1. Pre-wired Models are available only in the EE-SX67 Series.
- \*2. Only for Pre-wired Models.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

## **Ordering Information**

Connector Infrared light

Appearance	Sensing Connect- Sensing distance		Sensing distance	Output	Indicator mode	Мо	del

mounting				(selectable) *3 *4	No incident light	EE-SX674A	EE-SX674R							
200									Light-ON	Incident light	EE-SX474			
T-shaped, slot center 10 mm													Dark-ON/Light-ON (selectable) *3 *4	Incident light
F-shaped							Dark-ON/Light-ON (selectable) *3 *4	Incident light	EE-SX676	EE-SX676P				
R-shaped					Dark-ON/Light-ON (selectable) *3 *4	Incident light	EE-SX677	EE-SX677P						

<sup>\*3.</sup> Dark-ON when the L terminal of the connector is opened, and light-ON when the L terminal and positive (+) terminal are connected. Do not connect the L terminal to 0 V when using dark-ON operation. When using light-ON, it is useful to select the connector EE-1001-1. The L terminal and positive (+) terminal of this connector are connected in advance.

<sup>\*4.</sup> If you do not use the L terminal wire ((2) pink) when you use a Connector with Cable for an EE-1006 or EE-1010-series Photomicrosensor, noise may affect the Photomicrosensor. To prevent the effects of noise, cut the unused L terminal wire at the base of the connector and wrap it with insulating tape to prevent it from coming in contact with other terminals.

## Pre-wired Models Infrared light

	Sensing		Output	Indicator	Connecting	Мо	odel
Appearance	method	Sensing distance	configura- tion	mode	method	NPN output	PNP output
Standard						EE-SX670-WR 1M	EE-SX670P-WR 1M
L-shaped						EE-SX671-WR 1M	EE-SX671P-WR 1M
T-shaped, slot center 7 mm						EE-SX672-WR 1M	EE-SX672P-WR 1M
Close- mounting	Through- beam	5 mm	Dark-ON/ Light-ON	Incident	Pre-wired	EE-SX673-WR 1M	EE-SX673P-WR 1M
Close- mounting	type (with slot)	(slot wid	(selectable) *1 *2	light	Models (1m)	•	EE-SX674P-WR 1M
T-shaped, slot center 10 mm						EE-SX675-WR 1M	EE-SX675P-WR 1M

		2 m	EE-1010 2M *	
Connector with Robot Cable		1 m	EE-1010-R 1M *	
		2 m	EE-1010-R 2M *	
Connector	Hold-down Clip		EE-1006A	Applicable Photomicrosensors For EE-SX670□ and 470□ only. (Can be used only with EE-1006 Connectors for the Photomicrosensors listed above.)

Note: For details, refer to the Photomicro Sensors Accessories on EE- which can be accessed from your OMRON website.

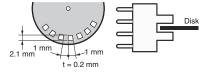

<sup>\*2.</sup> If you do not use the L terminal wire ((2) pink) when you use a Connector with Cable for an EE-1006 or EE-1010-series Photomicrosensor, noise may affect the Photomicrosensor. To prevent the effects of noise, cut the unused L terminal wire at the base of the connector and wrap it with insulating tape to prevent it from coming in contact with other terminals.

<sup>\*</sup> EE-1009- or EE-1010-series Connectors have a builtin locking mechanism to prevent cable disconnection when only the cable is pulled. To remove the Connector from the Sensor, grip the top and bottom of the Connector firmly and push into the Sensor once before pulling out. The locking mechanism prevents the Connector from being removed by pulling on the cable only and enables removal only when the Connector (housing) is pulled.

<sup>\*1.</sup> The indicator is a GaP red LED (peak wavelength: 690 nm).
\*2. The response frequency was measured by detecting the rotating disk shown at the right.

Note: The data applies to dark status. Operation may be affected by external light interference or light

coming through the sensing object.

## **Safety Precautions**

#### Refer to Warranty and Limitations of Liability.

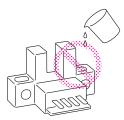

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

#### **Precautions for Safe Use**

#### Operating Environment

These Photomicrosensors have an IP50 (conforms to IEC) enclosure and do not have a water-proof or dust-proof structure. Therefore, do not use them in applications in which the sensor will be subjected to splashes from water, oil, or any other liquid. Liquid entering the Sensor may result in malfunction.

#### **Precautions for Correct Use**

Make sure that this product is used within the rated ambient environment conditions.

#### Installation

When direct soldering to the terminals, use the following guidelines.
 Soldering Conditions

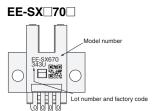

Item	Temper- ature	Permissible time	Remarks
Soldering iron	350°C max.	3 s max.	The portion between the base of the terminals and the position 1.5 mm from the terminal base must not be soldered.

 The terminal base uses a polycarbonate resin, which could be deformed by excessive soldering heat, resulting in damage to the product's functionality.

#### Lot Number and Model Number Legend

In the following diagrams, 343U indicates the lot number and factory where the product was manufactured. Do not include this code with the model number when ordering.

The QR code on connector models is used by OMRON only.

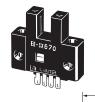

<sup>\*2.</sup> If you do not use the L terminal wire ((2) pink) when you use a Connector with Cable for an EE-1006 or EE-1010-series Photomicrosensor, noise may affect the Photomicrosensor. To prevent the effects of noise, cut the unused L terminal wire at the base of the connector and wrap it with insulating tape to prevent it from coming in contact with other terminals.
